

Douglas Fir

Pseudotsuga menziesii glauca

- ❁ Although not a true fir, it is a beautiful evergreen for the larger landscape. Open, tiered branches that are slightly pendulous, it has a conical shape, similar to that seen on spruces. Fast growing.
- ❁ Excellent evergreen for large lawns, parks, woodland areas, specimen planting or used in mass for screening. A soft-textured needle, ideal for planting along trail sides.

Height: 60-100 Feet
